

Fox Valley Park District

Parks and Recreation Needs Assessment Survey **Executive Summary Report**

Overview of the Methodology

Leisure Vision conducted a Parks and Recreation Needs Assessment Survey Fall of 2013 to help establish usage and satisfaction for current parks and facilities and to determine priorities for the future development of parks and recreation facilities, programs and services within the Fox Valley Park District. The survey was administered by mail and by phone.

Leisure Vision worked extensively with Fox Valley officials in the development of the survey questionnaire. This work allowed the survey to be tailored to issues of strategic importance to effectively plan the future system.

A seven-page survey was mailed to a random sample of 6000 households within Fox Valley Parks District. Approximately three days after the surveys were mailed each household that received a survey also received an automated voice message encouraging them to complete the survey. In addition, about two weeks after the surveys were mailed Leisure Vision began contacting households by phone. Those who had indicated they had not returned the survey were given the option of completing it by phone.

The goal was to obtain a total of at least 1500 completed surveys. A total of 1641 surveys were completed. The results of the random sample of 1641 households have a 95% level of confidence with a precision of at least +/-2.4%.

The following pages summarize major survey findings.

- ❖ **Have Respondents Visited Fox Valley Parks or Facilities Over the Past Year?** Eighty-three percent (83%) of respondents indicated that they have visited Fox Valley District parks or facilities during the past year.
