

# Waubonsie Lake

Montgomery & Kautz Roads, Montgomery  
Fox Valley Park District

**Fish Community:** Bluegill (59%) and largemouth bass (19%) most abundant. Gizzard shad, white crappie, green sunfish and white sucker comprised an additional 18%.

**Species average size, length:** Nearly 75% of largemouth bass were under 6 inches. Bluegill population skewed toward intermediate size fish (3 to 5 inches). Moderately abundant black crappie population with fish up to 8 ½ inches that adds to diversity of fishery.

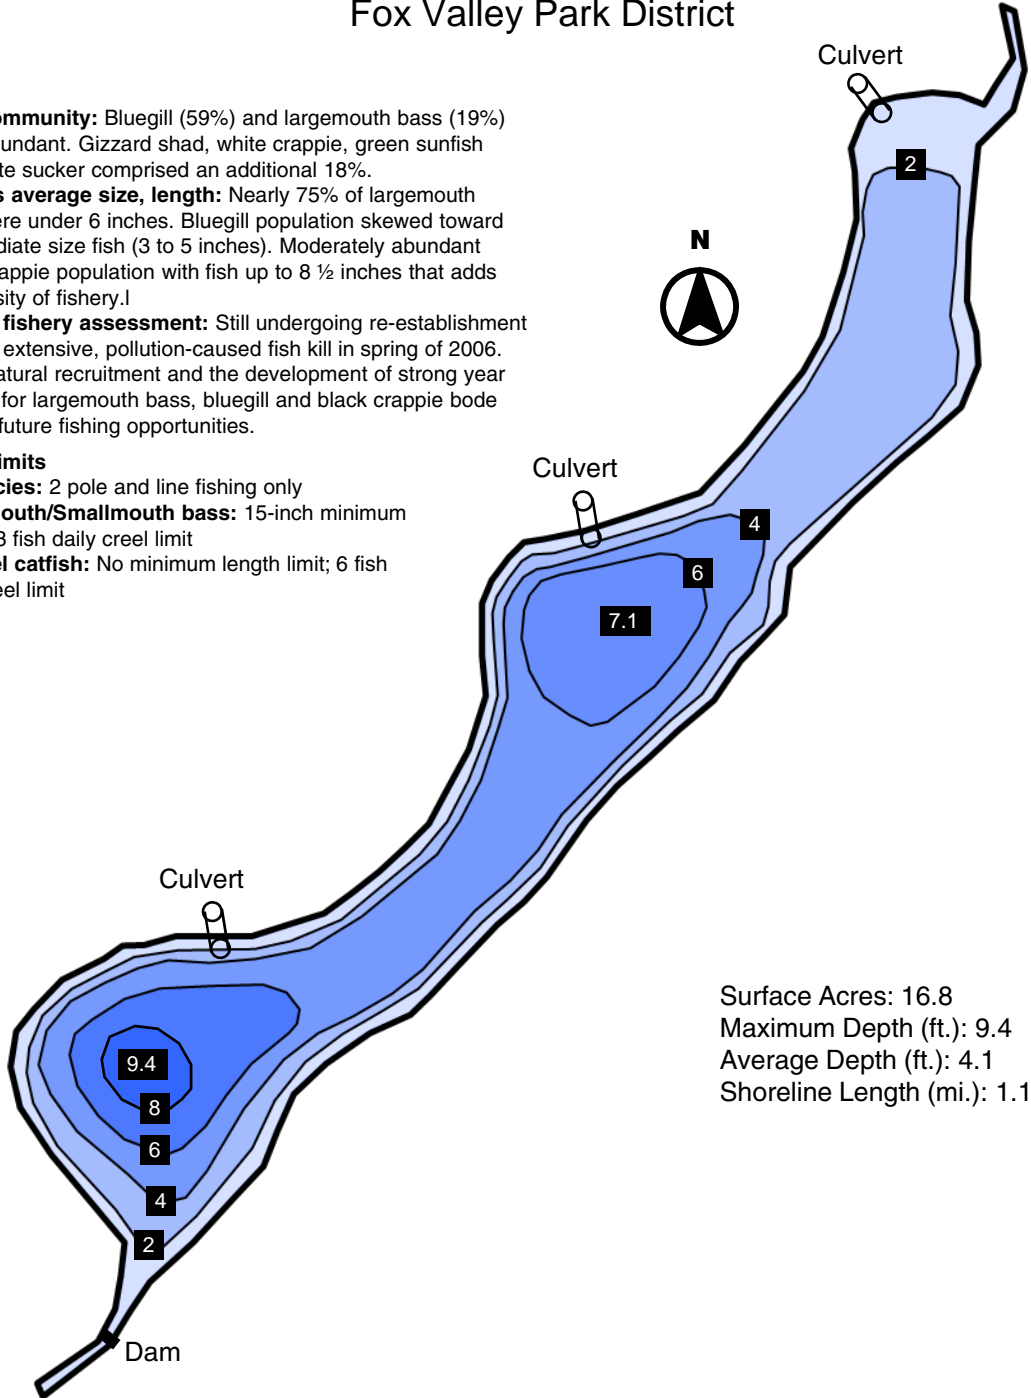

**Overall fishery assessment:** Still undergoing re-establishment after an extensive, pollution-caused fish kill in spring of 2006. Good natural recruitment and the development of strong year classes for largemouth bass, bluegill and black crappie bode well for future fishing opportunities.

## Creel Limits

**All species:** 2 pole and line fishing only

**Largemouth/Smallmouth bass:** 15-inch minimum length; 3 fish daily creel limit

**Channel catfish:** No minimum length limit; 6 fish daily creel limit
